

Heuristic Evaluation Workbook

Nielsen Norman Group — Jakob's 10 Usability Heuristics

Evaluator:	Mark Joshua B. Paronda	
Date:	May 14, 2026	
Product:	Daily Self-Care Planner	
Task:	Home Dash Board	

Heuristic 1: Visibility of System Status

Issues	Recommendations
○ The dashboard already clearly displays tasks, habits, mood, and progress status.	○ No major changes needed. Current progress indicators are clear and visible.

Heuristic 2: Match Between System and the Real World

Issues	Recommendations
○ Some users may not immediately understand the emoji-only mood display.	○ Add small text descriptions beside emojis for better understanding.

Heuristic 3: User Control and Freedom

Issues	Recommendations
○ The dashboard does not show visible customization or edit options.	○ Add optional edit/customize buttons for dashboard widgets.

Heuristic 4: Consistency and Standards

Issues	Recommendations
--------	-----------------

○ The dashboard already uses consistent colors, icons, and card styles.	○ no major changes needed. Maintain the current consistent design.
---	--

Heuristic 5: Error Prevention

Issues	Recommendations
○ No visible confirmation or warning messages are shown for user actions.	○ Add simple confirmation prompts for important actions if needed.

Heuristic 6: Recognition Rather Than Recall

Issues	Recommendations
○ Bottom navigation icons may rely too much on symbols alone.	○ Add clearer labels below navigation icons.

Heuristic 7: Flexibility and Efficiency of Use

Issues	Recommendations
○ No quick-add button is visible for adding tasks or moods.	○ add a floating action button for faster task and mood input.

Heuristic 8: Aesthetic and Minimalist Design

Issues	Recommendations
○ The dashboard already has a clean and visually appealing layout.	○ No major changes needed. Maintain the minimalist design and spacing.

Heuristic 9: Help Users Recognize, Diagnose, and Recover from Errors

Issues		Recommendations
○	Error messages or recovery options are not visible on the dashboard.	○ Add simple error notifications or retry options when needed.

Heuristic 10: Help and Documentation

Issues		Recommendations
○	First-time users may not fully understand graphs and trackers immediately.	○ Add small tooltips or onboarding guidance for new users.

Heuristic Evaluation Workbook

Nielsen Norman Group — Jakob's 10 Usability Heuristics

Evaluator:	Jodelyn B. Millesca	
Date:	May 15, 2026	
Product:	Daily Self-Care Planner	
Task:	Sign up/Log In Page, Profile	

Heuristic 1: Visibility of System Status

Issues	Recommendations
There is no loading icon to show the app is working after clicking "Sign Up."	Add a small spinner or progress bar to show the system is processing.

Heuristic 2: Match Between System and the Real World

Issues	Recommendations
Labels like "Contact Number" feel a bit formal for a wellness app.	Use friendlier words like "Phone" or "Mobile" to match how people talk.

Heuristic 3: User Control and Freedom

Issues	Recommendations
If a user makes a mistake while typing, they have to delete it letter by letter.	Add a small "X" button to clear the whole text box at once.

Heuristic 4: Consistency and Standards

Issues	Recommendations
○ The shadow effects on the "Login" and "Sign Up" buttons look slightly different.	○ Make sure all buttons use the same shadows and green colors.

Heuristic 5: Error Prevention

Issues	Recommendations
○ The Signup page Is missing a "Confirm Password" box.	○ Add a second password box to help users avoid making typos.

Heuristic 6: Recognition Rather Than Recall

Issues	Recommendations
○ The bottom menu only has Icons and no words.	○ Put small labels like "Home" or "Profile" under the Icons.

Heuristic 7: Flexibility and Efficiency of Use

Issues	Recommendations
○ Users have to type their email and password every single time they open the app.	○ Add a "Remember Me" checkbox to make logging In faster..

Heuristic 8: Aesthetic and Minimalist Design

Issues	Recommendations
There is empty space inside the white boxes on the Profile page.	Adjust the spacing to make the Info look more organized.

Heuristic 9: Help Users Recognize, Diagnose, and Recover from Errors

Issues	Recommendations
There is no red text to show a user if they typed an email address wrong.	Add red error messages to tell the user exactly what they need to fix..

Heuristic 10: Help and Documentation

Issues	Recommendations
The Login page is missing a "Forgot Password?" link.	Add a "Forgot Password?" button to help users who can't get into their account.

Heuristic Evaluation Workbook

Nielsen Norman Group — Jakob's 10 Usability Heuristics

Evaluator:	Julius P. Villralbo
Date:	May 13, 2026
Product:	Daily Self-Care Planner
Task:	Daily planner

Heuristic 1: Visibility of System Status (Low Severity)

Issues	Recommendations
Progress rings, streak badges, and checkmarks clearly show status at all times.	No action needed

Heuristic 2: Match Between System and Real World (Low Severity)

Issues	Recommendations
Labels use everyday language — "Drink Water", "Workout", "Bed time". reinforce meaning.	No action needed

Heuristic 3: User Control and Freedom (Medium Severity)

Issues	Recommendations
Skip and Cancel buttons exist but no undo for deleted habits — a gap found by 3 evaluators.	Add undo option for deleted habits

Heuristic 4: Consistency and Standards (Low Severity)

Issues	Recommendations
Green header, white cards, and bottom nav are consistent across all 8 screens.	No action needed

Heuristic 5: Error Prevention (Medium Severity)

Issues	Recommendations
Placeholder hints help, but no confirmation dialog before deleting tasks or habits.	Add confirmation dialog before deletion

Heuristic 6: Recognition Rather Than Recall (Low Severity)

Issues	Recommendations
- All icons paired with text labels. - No icon-only elements found throughout the prototype.	No action needed

Heuristic 7: Flexibility and Efficiency of Use (Medium Severity)

Issues	Recommendations
• Quick Actions row helps. However, no swipe gestures available for power users.	Add swipe gestures for efficiency

Heuristic 8: Aesthetic and Minimalist Design (Low Severity)

Issues	Recommendations
• Each screen focuses on one task. • Clean card layouts with ample whitespace.	No action needed

Heuristic 9: Help Users Recognize and Recover from Errors (High Severity)

Issues	Recommendations
• No error states or validation messages designed for empty forms. Most cited issue by all 5 evaluators.	Add error states and validation messages

Heuristic 10: Help and Documentation (High Severity)

Issues	Recommendations
• No onboarding tutorial or tooltip guidance. • Intensity slider and streak dots confuse new users.	Add onboarding tutorial and tooltips

Heuristic Evaluation Workbook
Nielsen Norman Group — Jakob's 10 Usability Heuristics

Evaluator:	John Clark O. Gonzaga
Course:	BSIT-3D
Date:	May 15, 2026
Product:	Habit Tracker App
Task Evaluated:	Home Dashboard

Heuristic 1: Visibility of System Status

Issues	Recommendations
The circular progress ring showing 10% on the Today's Focus card gives clear real-time feedback. However, the Habit Consistency section shows 'Drink Water: 0 days' without any visual indicator (e.g., streak flame or progress bar) to signal how far the user is from a goal. The Mood Trends row shows emojis for all days from Mon–Sun, but since it is only Day 1, the future days show emojis that may confuse users about whether data exists.	Add a small progress bar or streak counter under each habit icon in the Habit Consistency section to show daily progress visually. For the Mood Trends section, display empty/greyed-out slots for future days that have not yet been logged so users understand past vs. upcoming entries.

Heuristic 2: Match Between System and the Real World

Issues	Recommendations
The app uses familiar language like 'Daily Overview', 'Habit Consistency', and 'Mood Trends' which aligns well with real-world self-care concepts. However, labeling a habit as '0 days' on Day 1 for 'Drink Water' may confuse users — it implies they have not started, but other habits already show 'Day 1'. This inconsistency does not match the user's real experience.	Standardize the habit day counter so that all habits start at 'Day 1' on the first day, or use a label like 'Start Today' for habits not yet logged, to better reflect the user's real-world progress and avoid confusion.

Heuristic 3: User Control and Freedom

Issues	Recommendations
There is no visible option for users to edit, rearrange, or remove the habit cards (Drink Water,	Add an Edit or Customize button on the dashboard to allow users to add, remove, or reorder habit

Meditate, Exercise, Journaling). There is also no way to undo a mood log or habit check-in if the user accidentally taps the wrong entry. The dashboard appears to be read-only with no customization affordance.	cards. Provide a short undo option (e.g., a snackbar with 'Undo' lasting a few seconds) after a user logs a mood or completes a habit.
--	---

Heuristic 4: Consistency and Standards

Issues	Recommendations
The app uses a consistent green color palette, rounded card styles, and icon design throughout the Home Dashboard. However, the bottom navigation bar uses a mix of emoji-style icons (a smiley face for mood) and flat line icons (home, calendar, chart, bell), which creates a visual inconsistency in the icon style across the navigation bar.	Standardize all bottom navigation icons to one consistent icon style — either all flat/outline icons or all filled icons. Replace the emoji smiley with a matching flat-style mood icon to maintain visual harmony.

Heuristic 5: Error Prevention

Issues	Recommendations
There are no visible safeguards to prevent accidental actions on the dashboard. For example, if a user taps on a habit card or the mood emoji row, there is no confirmation step before the action is recorded. Accidentally logging the wrong mood for a day or marking a habit as complete could corrupt the user's trend data.	Add a brief confirmation step or visual feedback (e.g., a short animation or a pop-up saying 'Mood logged!') after important actions. For destructive or data-changing actions, consider a simple 'Are you sure?' prompt to prevent unintended entries.

Heuristic 6: Recognition Rather Than Recall

Issues	Recommendations
The bottom navigation bar has 5 icons (home, mood, calendar, chart, bell) but only the currently active icon (chart/progress) appears highlighted. The other icons have no text labels, requiring users to recall or guess each icon's function rather than recognizing it at a glance.	Add short text labels below each bottom navigation icon (e.g., 'Home', 'Mood', 'Plan', 'Progress', 'Alerts'). This eliminates the need for users to memorize icon meanings and is consistent with mobile navigation best practices.

Heuristic 7: Flexibility and Efficiency of Use

Issues	Recommendations
The dashboard does not provide a quick-action shortcut for power users to rapidly log a mood or mark a habit as done directly from the home screen. Users must presumably navigate into each section individually to record their data, adding extra steps for daily repeat actions.	Add a Floating Action Button (FAB) or a quick-log shortcut bar on the dashboard so that frequent actions like 'Log Mood' or 'Mark Habit Done' can be completed in one tap from the home screen, speeding up the daily routine for returning users.

Heuristic 8: Aesthetic and Minimalist Design

Issues	Recommendations
The dashboard has a clean, minimal design with a soft green palette that is visually appealing and not cluttered. However, the subtitle text 'Your journey to insights starts here.' and the motivational text inside the Mood Trends card ('Tracking begins today! Log daily to see your trends.') take up significant vertical space and may feel unnecessary to returning users who already understand the app.	Consider hiding or collapsing the onboarding-style motivational text after the user's first session. For returning users, replace it with a dynamic and relevant message (e.g., streak count or a motivational quote) to keep the dashboard fresh and reduce visual noise.

Heuristic 9: Help Users Recognize, Diagnose, and Recover from Errors

Issues	Recommendations
The dashboard does not display any error messages, loading states, or recovery options. If the app fails to sync data, or if a habit entry fails to save, the user would have no indication that something went wrong. There is also no visible retry button or error notification area.	Implement non-intrusive error toast notifications at the bottom of the screen when an action fails (e.g., 'Could not save habit. Tap to retry.'). Ensure that any failed data entries are queued and retried automatically, with a clear status indicator for the user.

Heuristic 10: Help and Documentation

Issues	Recommendations
First-time users seeing the circular progress ring (10% — Getting Started), the Mood Trends emoji row, and the Habit Consistency section for the first time may not immediately understand what these elements represent or how to interact with	Add a brief onboarding walkthrough for new users (e.g., spotlight tooltips highlighting each section on first launch). Include a small '?' help icon on cards like Today's Focus and Mood Trends so users can tap to

them. There is no onboarding tooltip, help icon, or tutorial visible on the screen.

learn what the metric tracks and how to improve it.

Heuristic Evaluation Workbook

Nielsen Norman Group — Jakob's 10 Usability Heuristics

Evaluator:	Meljun Polillo
Date:	May 17, 2026
Product:	Daily Self-Care Planner
Task:	Habit Tracker

Heuristic 1: Visibility of System Status

Issues	Recommendations
➤ Habit completion is shown with checkmarks, but there is no percentage or count of habits completed for the day (e.g., "3 of 5 habits done").	➤ Add a daily summary counter (e.g., "3/5 habits completed") at the top of the Habit Tracker to give users an at-a-glance status update.

Heuristic 2: Match Between System and the Real World

Issues	Recommendations
➤ Habit names like "Drink Water" and "Workout" use natural language well. However, the term "streak" may not be immediately clear to non-gamified users.	➤ Add a brief tooltip or label such as "Days in a row" next to the streak counter to make it universally understood.

Heuristic 3: User Control and Freedom

Issues	Recommendations
➤ Users cannot reorder or archive habits. Once a habit is added, there is no visible way to temporarily disable it without deleting it entirely.	➤ Add a pause or archive option for habits so users can manage their list without permanently losing their streak history.

Heuristic 4: Consistency and Standards

Issues	Recommendations
➤ The habit cards use consistent green colors and rounded shapes. However, the intensity slider uses a different visual style compared to the rest of the card components.	➤ Redesign the intensity slider to match the same rounded, green-accented style used throughout the tracker for visual harmony.

Heuristic 5: Error Prevention

Issues	Recommendations
➤ No warning is displayed before a habit is deleted. Users can accidentally remove a habit and its entire history without any prompt.	➤ Add a confirmation dialog ("Delete this habit? This cannot be undone.") before any habit is permanently removed.

Heuristic 6: Recognition Rather Than Recall

Issues	Recommendations
➤ Habit icons are shown without text labels inside the tracker cards, requiring users to recall which icon represents which habit.	➤ Always display a short text label alongside each habit icon within the card for immediate recognition without relying on memory.

Heuristic 7: Flexibility and Efficiency of Use

Issues	Recommendations
➤ Users must open each habit card individually to mark it complete. There is no quick-check option from the main tracker list view.	➤ Allow users to tap a checkbox or swipe directly on the habit list item to mark it done without opening the full card.

Heuristic 8: Aesthetic and Minimalist Design

Issues	Recommendations
➤ The Habit Tracker screen displays all habits simultaneously, which can feel visually overwhelming when a user has many habits added.	➤ Limit the visible habits to a set number (e.g., 5) and allow users to scroll or group them by category to keep the layout clean.

Heuristic 9: Help Users Recognize, Diagnose, and Recover from Errors

Issues	Recommendations
➤ If a habit entry fails to save (e.g., due to no connectivity), the user receives no error message and may not realize their data was not recorded.	➤ Display a clear error toast notification when a save fails and offer a retry button so users can recover without losing their entry.

Heuristic 10: Help and Documentation

Issues	Recommendations
➤ New users have no guidance on how to set up habits, configure the intensity slider, or understand what the streak counter tracks.	➤ Include a short onboarding walkthrough on first launch and add a help icon on the Habit Tracker screen linking to a quick guide.
